

628 MAP 7: Jonesville Subunit: Proposed Designated Shooting Area

- 629
- 630 b. Interpretive Displays, Regulatory, & Informational Signs. Developed facilities, trails, and public use
- 631 sites should include all informational and regulatory signage necessary for management and
- 632 enforcement. Wishbone Lake and Slipper Lake may include interpretive displays to inform the
- 633 public about the purposes of the Moose Range and JPUA, existing outdoor recreational
- 634 opportunities, natural, cultural, and historic values, and unique geologic features. The displays
- 635 can be used to inform the public about natural resource values and multiple use management of
- 636 the natural resources. Interpretive signage along trails outside of public use sites should be
- 637 limited. See the trails section in Chapter 2 for more information about trail wayfinding.
- 638 c. Fossil Viewing. Fossil viewing is a dispersed outdoor recreational activity that is popular in the
- 639 Jonesville Management Subunit. The activity may be restricted by DNR if the public's safety is
- 640 endangered, if the activity interferes with coal mining operations, or if the cultural/heritage value
- 641 of the resource warrants restrictions. All fossils are the property of the State, and it is unlawful to
- 642 collect or remove them without the proper authorizations (AS 41.35).

643 6. Subsurface Resources

644 The Jonesville Management Subunit is open to locatable and leasable mineral development.
